

Smarter Healthcare

powered by
THiNaër™

People. Places. Things.
Tracking what matters.

www.thinaer.io

The world is changing.

People are becoming more connected.

Places are virtually coming to life.

Things are getting smarter.

This is the Internet of Things (IoT).

By 2019
85% of businesses
plan to adopt IoT
technology.

The Internet of Things: Today and Tomorrow, Aruba

By 2020
there will be more
than 200 billion
connected devices.

A Guide to the Internet of Things, Intel

By 2030
IoT will add
\$10-15 trillion
to worldwide GDP.

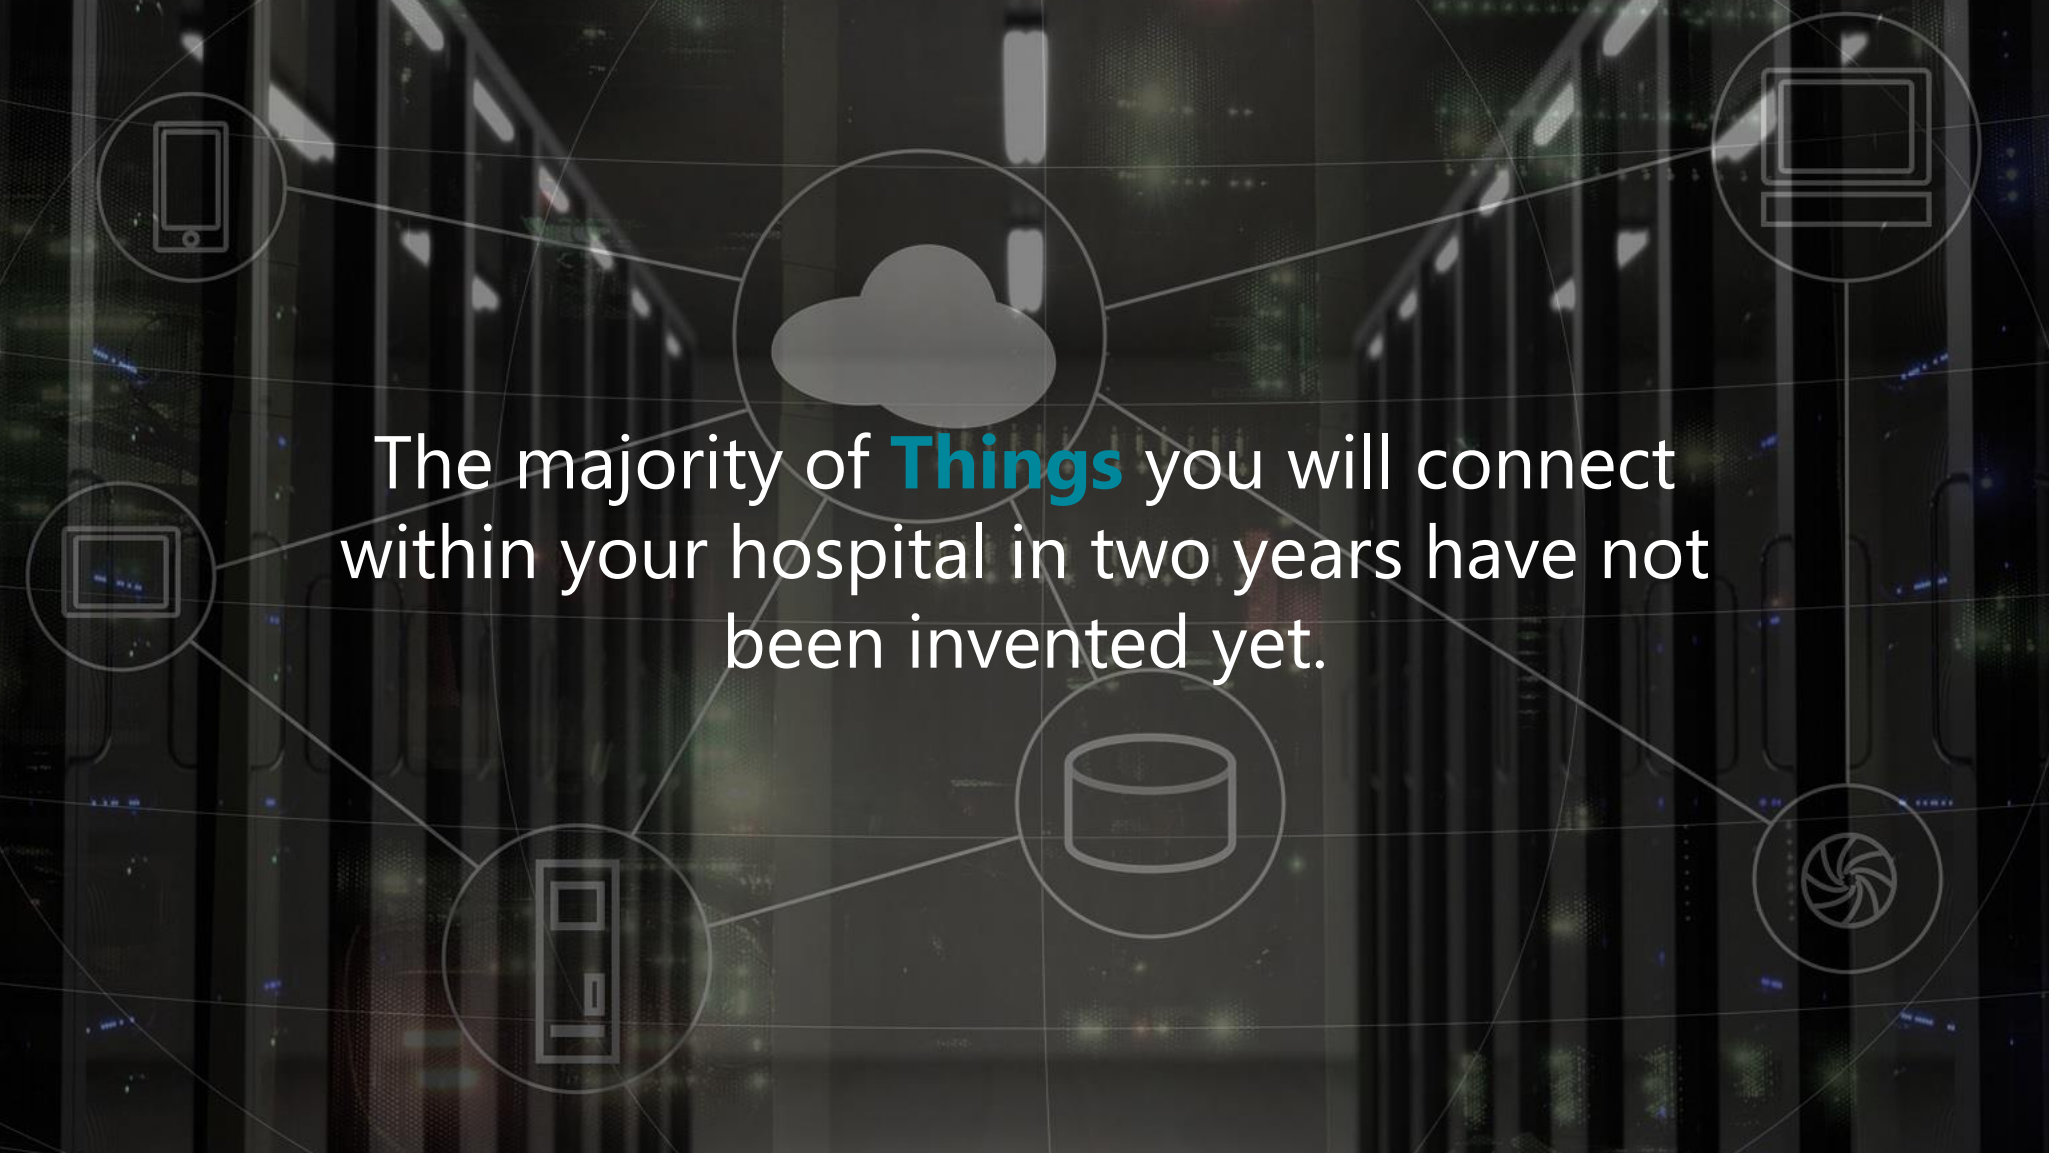

Industrial Internet Insights Report, General Electric (GE)

The global IoT healthcare market alone
is estimated to reach
\$136B by 2021.

Internet of Things (IoT) Healthcare Market Report, Allied Market Research

Age old problem
of RTLS
Too expensive and
two hard to install

THiNaër brings it
all together and
turns it into
actionable data
today!

The majority of **Things** you will connect within your hospital in two years have not been invented yet.

THiNaër makes it easy to add your
new THINGS!

Make facilities smarter and more compliant to requirements

by automatically knowing the locations of key **people** and **things** and triggering alerts for out-of-range values.

Out of the box today!

Reduce readmissions by easily adding new health and wellness devices to THiNaër@HOME

Leading Edge Wearables

Smart Pill Dispensers

Smart Scales

Out of the box today!

Patient care is improved

by making workflows more efficient and enabling staff to spend more time providing care and less time looking for the **people** and **things** they need.

Procedure rooms are safer, more compliant and generate more revenue

by monitoring temperature and
humidity of key **places** and
triggering fluctuation alerts.

Trigger Details
+ Edit

IV Pole 9F - Humidity	Comparator	Parameter(s)	Created At
<i>Relative Humidity Trigger</i>	If a beacon is greater than:	62% Relative Humidity	7 Sep 2017, 15:41

⌵ Beacons

Alias	Beacon ID	Last Triggered	Trigger Active?
IV Pole	DE:5A:FF:00:01:9F	Not Yet Triggered	false

A THiNaër customer successfully created temperature and humidity triggers and actions to end recurring OR shutdowns.

Each shutdown of each OR could cost as much as \$90,000 per day.

Equipment costs are reduced by 5% or more

by automatically tracking
things like infusion pumps and
wheelchairs.

A THiNaër customer is installing hospital wide due to an average of 10% of equipment missing at each monthly review.

A new THiNaër customer will be creating approved zones for high value portable equipment after an \$80,000 unit was accidentally thrown in the trash.

Dementia wandering is immediately improved

by allowing **people** the freedom to roam while decreasing risk of getting lost or hurt simply by monitoring location information and informing personnel of location changes.

THiNaër is currently integrating Triggers and Actions with a gate and door system for a customer.

Joint Commission compliance is improved

through access to ***real-time data*** about locations,
temperature and humidity.

A THiNaër customer is using the Sonar reporting feature to show temperature and humidity compliance avoiding \$10,000 fines per incident.

Make facilities smarter and more compliant to requirements

by automatically knowing the locations of key **people** and **things** and triggering alerts for out-of-range values.

Meet THiNaër:

Innovative open technology platform
generating a new class of data
transforming the *Internet of Things* into
The Internet of People, Places & ThingsSM.

The THiNaër data ingest engine sees Bluetooth and Bluetooth Low Energy (BLE) signals throughout your entire organization and passes them to the THiNaër platform for packaging, distribution and consumption.

It's the most comprehensive view of operations ever.

THiNaër 5.0.1 Technology and Products

Cloud IoT and Location Engine

Gateway agnostic platform for aggregating data from all Bluetooth devices and beacons, Overlook module for location learning and tracking, data cleansing and historical data storage. Sense and respond scaling with no human interaction.

THiNaër API

REST API, Web Hooks, iOS SDK & Android SDK

Developer Kits & Tools

Developer.thinaer.io

Sonar

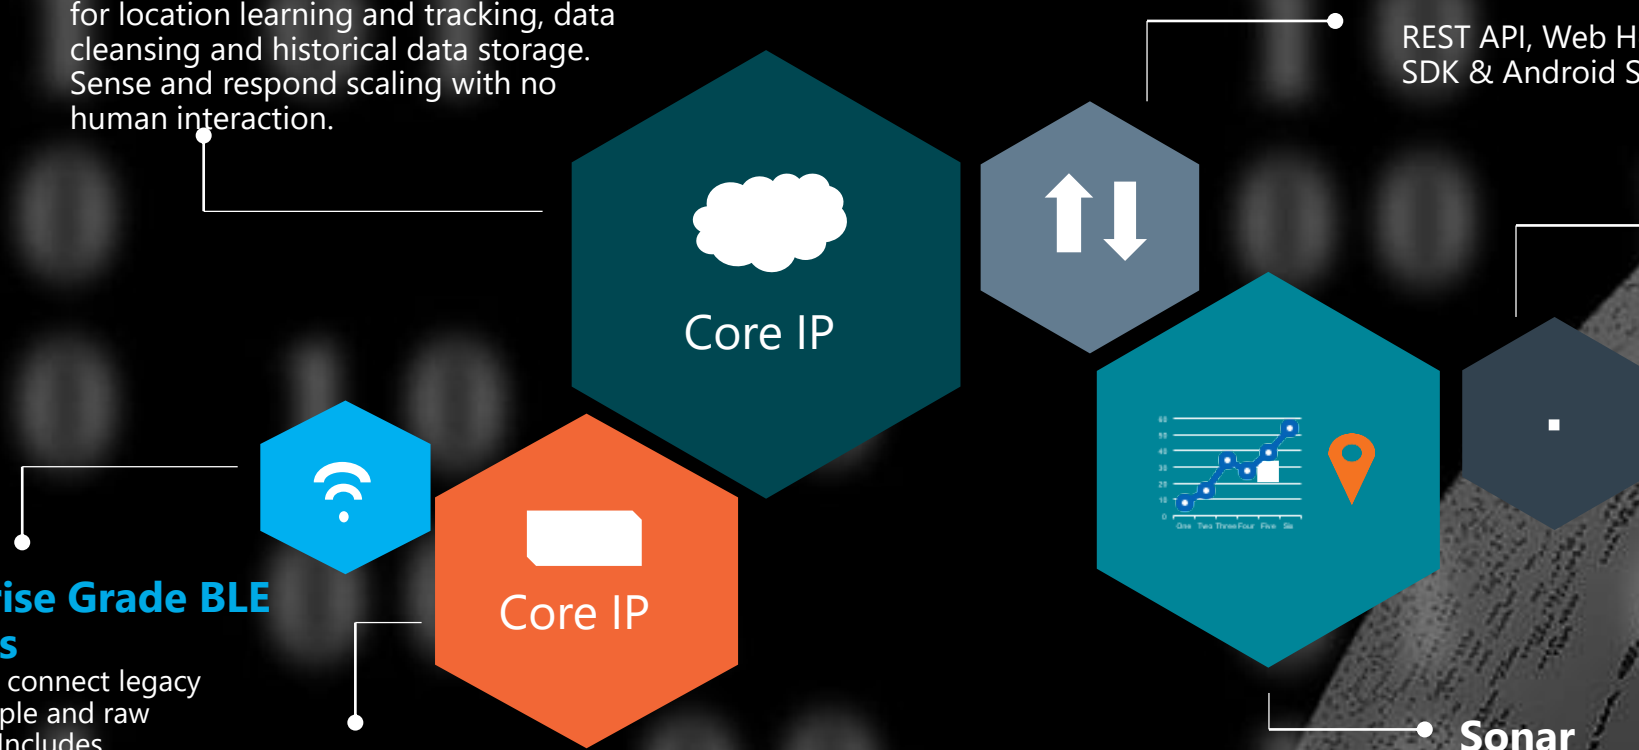

Powerful IoT Dashboard and location mapping application with triggers and actions that support endless IoT use cases.

Enterprise Grade BLE Beacons

Beacons to connect legacy assets, people and raw materials. Includes Temperature, Humidity and Accelerometer to enable new high value use cases.

Enterprise Grade BLE Gateways

We built our own gateway to quickly enable today's IoT use cases, designed to become the new intelligent edge of the enterprise.

THiNaër 5.0.1 Technology and Products

Enterprise Grade BLE Beacons

THiNaër 5.0.1 Technology and Products

Core IP

Enterprise Grade BLE Gateways

We built our own gateway to quickly enable today's IoT use cases, designed to become the new intelligent edge of the enterprise.

VitalBand detects falls, accurately monitors critical vital signs and activity with both automatic and wearer activated emergency response –
Technology/Marketing partnership with Intel

- Provides emergency calls & texts
- Sets reminders & goal notifications
- Waterproof & sweat-proof
- On wrist charging
- Heart rate
- Respiration rate
- Fall Detection
- Step count

- Alerts are easily set, data is easily shared with family, caregivers or physicians wirelessly with permission
- Easy to dismiss false alerts
- Easily pairs to smart phone, tablet or hub

SensoSCAN is a patented, non-invasive, cuff-less, wireless, mobile continuous vital signs monitoring platform that inexpensively and efficiently replaces multiple devices across many use cases

- Heart rate
- Respiration rate
- Blood oxygen saturation
- Blood pressure
- Pairs to mobile or hub, transfers data to cloud for viewing with permission
- Interfaces with all data platforms like Epic, etc.

- Blood Pressure
- Heart Rate
- SPO2
- Respiration Rate
- Activity Level
- ECG
- Hydration
- Stress Level
- Body Fat
- Skin Temperature
- Heart rate Variability
- Blood Pressure variability
- Altitude
- Fall Detection
- Sleep Monitoring
- Steps

SensoRING is designed for personal performance, military, first responder and highly active use cases

- Vitals monitoring
- Wellness monitoring
- Stress monitoring
- Performance monitoring
- Sleep monitoring

THiNaër 5.0.1 Technology and Products

Sonar
 Powerful IoT Dashboard and location mapping application with triggers and actions that support endless IoT use cases.

Sonar

Web-based application

Enables organizations to track assets and understand utilization trends, patterns and opportunities for optimization through a user-friendly interface.

Enables more meaningful insights

Location

- *Where is everyone? Is everything where it's supposed to be?*

Temperature/Humidity

- *Have there been fluctuations? Are we still compliant? Is the location too hot? Too cold?*

Triggers & Alerts

- *Is it time to send help, alert someone or trigger an event?*

The screenshot displays the Sonar web application dashboard. At the top, there is a navigation bar with the Sonar logo and a search bar. Below the navigation bar, the dashboard is organized into several sections, each with a title, an icon, and a brief description:

- Clients:** Clients are individual companies or groups within your application. Clients are not required, but can be handy in organizing your data. If you are a single company, this can be left blank.
- Venues:** Venues are a great way to organize your beacons and gateways. Normally Venues relate to physical locations but you can also use them like a group. Venues offer a more condensed version of this dashboard.
- Maps:** Maps are not directly related to venues but can be if you want! Look at your beacons on a map view. Drag & Drop environmental beacons and gateways. Live near real time proximity and environmental updates displayed.
- Zones:** Zones are not directly related to venues but can be if you want! Use zones as "groups" or a way to organize your devices.
- Gateways:** Gateways can be given an alias to be more clear on Reports and other items. Gateways can be assigned to a Venue, Zone or BOTH.
- Beacons:** Beacons are your eyes and ears when deployed. They can be given an alias like "Wheelchair" or "Lamp" to be more recognizable on reports. When a Beacon is assigned you can keep track of its Status and Tags.

What are the questions you'd like to ask your organization?

*The THiNaër platform can answer **questions related to data** and transmitted by an IoT-enabled entity:*

- Where are my IV pumps?
- What equipment is in room 302?
- What is the temperature in OR Room 8?
- How many nurses are on 3 north?
- What equipment on 3 North needs to be serviced in the next 90 days?
- Where is patient #28458?
- Show me an inventory of medical equipment and devices for each location in a facility.
- How much time do your nurses spend in patient rooms, nurses station, other locations?

Why THiNaër?

- Significantly lower cost
- Doesn't require infrastructure overhaul
- Faster and easier to deploy
- Easier to maintain
- Simpler to integrate
- More flexible and configurable
- Enables better data-driven decisions

THiNaër in Action

- Tag your people or your things
- Drop our gateway(s) onto your guest network
- Monitor location information through our *Sonar* web-based application
- Create custom triggers to alert key personnel when conditions or locations change
- Access critical data to feed existing systems by integrating with THiNaër APIs

A THiNaër Exclusive!

The Internet of People, Places and ThingsSM

- An intelligent database layered on top of raw ingested, real-time data
- Agnostic & unconcerned with underlying device types
- Context aware, industry specific & configurable
 - Ex: People have permissions & geolocation restrictions; in hospitals they're nurses, doctors & patients; in manufacturing they are equipment operators, managers & drivers
 - Ex: Places are fixed & provide real-time information about the people and things they see
 - Batching scheme for downstream processing and enables manual data science
- Data is packaged & made available via API for 3rd party application integration and Artificial intelligence solutions
- Ask questions of your data using natural language

Why THiNaër?

- Reduce spend on moveable medical equipment by 5% annually.
- Improve the patient experience and operational efficiency by simply finding “things” faster.
- Reduce losses due to inadvertently throwing small high value equipment away.
 - If equipment is placed in a drawer, THiNaër still sees it!
- Reduce losses due to theft by being alerted if equipment leaves an approved area or zone.
- Save time and improve compliance by having assets raise their hand when they are due for maintenance.
 - Assets even tell you where to come pick them up!
- Avoid joint commission fines because ORs tell you when they are out of Temperature or Humidity range.
- Joint commission reporting for Temperature/Humidity becomes just a few clicks.
- COMING SOON! Reduce readmissions by monitoring patients with THiNaër@HOME.
- COMING SOON! Improve the patient experience by letting them sleep the evening prior to discharge. Capture and monitor vitals via a wearable rather than waking the patient up every hour.

Team THiNaër Management

Bryan Merckling CEO

Bryan was COO and Co-Founder of Webify, which was acquired by IBM. Bryan then served as Director of World Wide Software Strategy at IBM.

Bryan also founded a sports technology company which has been acquired after being featured on ESPN. The technology continues to be used by companies such as Nike, Under Armour, GoPro, Tour Academies and Hank Haney Golf among others.

Bryan led CommerceOne.net, the world's largest online B2B marketplace as SVP.

Nate Rowland VP of Technology

Nate is an expert in Big Data technology and mission critical platforms with more than 10 years of experience.

Nate was formerly a Principal Engineer at Research Now. Before that he developed platform technology for Bug Labs.

Rusty Lewis CGO & CSO

Rusty served as CTO of McKesson and CTO/CIO at Vizient, the world's largest Healthcare GPO, where he led all technology advancements including data analytics.

Rusty has multiple successful Healthcare exits and holds more than 20 patents.

Katie Nunez Director of Marketing

Katie was a founding member of the Zebra Technologies IoT platform team where she led Digital Marketing and UI/UX for Customer Facing Applications.

She led GTM strategy for the first-ever integrated narratives by Narrative Science and is co-Chair of Digital Strategy for the IoT Council by Illinois Technology Association.

Ben Pyle Architect, Healthcare Solutions & Data Analytics

Ben was Director of Strategic Technology & Enterprise Architecture at Vizient, the world's largest Healthcare GPO where he led 5 software development teams.

Ben and his teams rewrote *the Vizient Clinical Enterprise Data Warehousing & Business Intelligence* products in addition to a *Surgical Cost per Case* solution.

Tricia Shevlin VP of Sales

Tricia is a passionate change agent focused on building channel communities. She spent the past decade leading sales, channel development and marketing for Advantix.

She also supported the launch of the first-ever digital network at AT&T and Vice Chair on CompTIA's Smart Cities Advisory Council.
